

Investment Objective: The Aggressive Allocation Fund seeks capital appreciation.

Investment Suitability: The Aggressive Allocation Fund may be suitable for investors who have a long-term investment horizon, possess a relatively high tolerance for risk and want to diversify by adding an aggressive investment option that combines U.S. and international stocks. The Fund attempts to achieve its objective, through investments primarily in the Select Funds, by combining a greater percentage of U.S. equity securities with a smaller percentage of international equity securities.

Securities of foreign issuers may be negatively impacted by political events, economic conditions or inefficient, illiquid or unregulated markets in foreign countries, and they also may be subject to inadequate regulatory or accounting standards, which may increase investment risk. Small company stocks are subject to greater risk than large company stocks due to more volatility and less liquidity. This description of risks is provided as a summary of the principal investment risks associated with this mutual fund. Refer to the Fund's prospectus for more detailed risk information.

GuideStone Capital Management, LLC, the adviser to the Fund, maintains a sub-advisory agreement with Parametric Portfolio Associates LLC ("Parametric") under which Parametric will provide "completion portfolios" within the Fund from time to time. These "completion portfolios" are used to assist in preserving the desired risk exposures for the Fund in furtherance of its investment objective. Completion portfolios that are short-term in nature are not included in the portfolio holdings of the Fund listed above.

Standard deviation—Depicts how widely returns varied over a certain period of time. A high standard deviation implies greater volatility and greater risk.

R-squared—Shows the percentage of a fund's performance that is explained by movements in the benchmark index. An R-squared of 100% indicates that all movements of a fund can be explained by movements in the benchmark.

Beta vs. Benchmark—Beta is a measure of a fund's sensitivity to market movements as defined by the fund's benchmark. A fund with a higher beta relative to the benchmark is more volatile than the benchmark.

Beta vs. S&P 500[®] Index—Beta is a measure of a fund's sensitivity to market movements as defined by the S&P 500[®] Index. A fund with a higher beta relative to the S&P 500[®] Index is more volatile than the S&P 500[®] Index.

²The Morningstar Rating[™] for funds, or "star rating," is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five- and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36–59 months of total returns, 60% five-year rating/40% three-year rating for 60–119 months of total returns and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Ratings are for the share class shown only; other classes may vary. **Past performance is not guarantee of future results.**

³Asset Allocation subject to change at any time. Pie chart is a representation, and actual exposures may differ. The size denotes the relative weighting in the Fund.

⁴Due to rounding, portfolio holdings data may not sum to 100%.
