

Equity Investment Approach

Investment Objective: The Equity Index Fund seeks to provide investment results approximating the aggregate price and dividend performance of the securities included in the S&P 500® Index.

Investment Suitability: The Equity Index Fund may be suitable for investors who seek higher, long-term rates of return, can accept significant short-term fluctuations in account value and want to diversify their portfolio by adding a potentially higher return, higher risk option of stocks.

Economic, market, political and other conditions and events can cause the value of equity securities to fluctuate. This description of risks is provided as a summary of the principal investment risks associated with this mutual fund. Refer to the Fund's prospectus for more detailed risk information.

Calendar Year Performance

■ Fund ■ Benchmark

The performance data quoted represents past performance and does not guarantee future results. Current performance may be lower or higher than the performance data quoted. Performance data current to the most recent month-end and complete calendar year performance may be obtained at [GuideStoneFunds.com/Funds](https://www.GuideStoneFunds.com/Funds). Benchmark performance numbers are provided by Morningstar, Inc. and have not been verified by GuideStone Funds. The investment return of an investment will fluctuate so that shares, when redeemed, may be worth more or less than their original cost. Year 2001 annual performance began 08/27/2001. Returns exceeding 20% reflect unusual market conditions and may not be sustained at this level over the long term.

Sector Holdings

Top Ten Equity Holdings

Price to Earnings Ratio—A ratio used to compare the price of a fund's stocks with their per-share earnings.
Price to Book Ratio—A ratio used to compare the book value of a fund's stocks with their market value.

Weighted average market cap—Market capitalization refers to the market value of a public company's outstanding shares of stock and is frequently used to show the size of the company. Weighted average market capitalization reflects the average size of the companies whose equity securities are held in the portfolio.

Standard deviation—Depicts how widely returns varied over a certain period of time. A high standard deviation implies greater volatility and greater risk.

R-squared—Shows the percentage of a fund's performance that is explained by movements in the benchmark index. An R-squared of 100% indicates that all movements of a fund can be explained by movements in the benchmark.

Beta vs. Benchmark—Beta is a measure of a fund's sensitivity to market movements as defined by the fund's benchmark. A fund with a higher beta relative to the benchmark is more volatile than the benchmark.

¹The S&P 500® Index is a market capitalization-weighted equity index composed of approximately 500 U.S. companies representing all major industries. The index is designed to measure performance of the broad domestic economy through changes in the aggregate market value of its constituents. "Standard & Poor's®", "S&P®", "S&P 500®", "Standard & Poor's 500" and "500" are trademarks of The McGraw-Hill Companies, Inc. and have been licensed for use by GuideStone Funds®. The Product is not sponsored, endorsed, sold or promoted by Standard & Poor's, and Standard & Poor's makes no representation regarding the advisability of investing in the Product. Index used with permission. It is not possible to invest directly in an index.

²The Morningstar Rating™ for funds, or "star rating," is calculated for managed products

(including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds and separate accounts) with at least a three-year history.

Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five- and 10-year (if applicable) Morningstar Rating metrics.

The weights are: 100% three-year rating for 36–59 months of total returns, 60% five-year rating/40% three-year rating for 60–119 months of total returns and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Ratings are for the share class shown only; other classes may vary. **Past performance is not guarantee of future results.**

³Asset Allocation subject to change at any time. Pie chart is a representation, and actual exposures may differ. The size denotes the relative weighting in the Fund.

⁴Due to rounding, portfolio holdings data may not sum to 100%.

⁵Sub-adviser composite is subject to change at any time. The percentages shown reflect the target allocations of the Fund. Actual sub-adviser weights may differ at any time. Due to rounding, target allocations may not sum to 100%. There can be no guarantee that any strategy will be successful. All investing involves risk, including potential loss of principal.
